

RadLight Reader

RadLight Reader, designed to work with the RadWatch Dosimeter, employs the robust optically stimulated luminescence (OSL) technology.

RadLight Reader offers the following features:

- Works exclusively with the Radwatch dosimeters
- Leverages Apple iPad mini for intuitive user interface
- Visual cues ensure proper orientation when RadWatch is placed in the drawer (with no knobs to turn)
 - When drawer is pushed in, reader automatically removes the slide from the watch base and positions each sensor to be read
- Utilizes a battery or AC power

RadLight Reader is engineered to withstand extreme environmental conditions experienced by firefighters and emergency responders.

Data Transfer:

- At any point in time, including during dosimeter readings, data reports may be e-mailed to multiple command sites directly from the RadLight Reader
- This allows for multiple personnel to review live data simultaneously. Wireless communication must be enabled for e-mail transmission
